

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

(1) By accepting membership on the International Committee; (2) by being present in person at the gathering in Brünn on the date mentioned; (3) by making a voluntary contribution toward the expenses of the gathering and of the *Festschrift*; and (4) by submitting a manuscript for publication in the memorial volume. Such MSS. should be sent to Professor Dr. Hugo Iltis, Bäkergrasse 10, Brünn, Czechoslovakia, and should be in his hands by the end of May, 1922. Money contributions should be made payable to the Mendelfeier-Konto, Böhmische Eskompte-u. Kreditbank, Brünn. It is hoped that American geneticists will cooperate as fully as possible to make the celebration a success.

COLLOID CHEMISTRY AT THE UNIVERSITY OF WISCONSIN

THE chemistry department of the University of Wisconsin announces that Professor The. Svedberg, of the University of Uppsala, will be in residence during the second semester of the scholastic year of 1922-23 and the summer session of 1923.

While at Wisconsin, Professor Svedberg will organize and direct the research work in colloid chemistry, and will also give two lectures each week on the subject and conduct two weekly seminars. One seminary will be devoted to the broader aspects of colloid chemistry and the other to its biological applications.

Professor Svedberg is recognized as one of the international authorities on the subject of colloid chemistry. He is the author of many papers dealing with the fundamental principles of colloid chemistry and has written the best known treatises on the preparation of colloids. His work has been recognized by the award of numerous prizes and special research funds and he has been honored by numerous foreign societies.

During the summer session of 1923, lasting for a period of six weeks, the lectures given during the second semester will be repeated for the benefit of educators and research workers who find it impossible to attend the university during the regular session. A seminary will also be conducted throughout the summer session.

Advanced workers who desire to do work under the direction of Professor Svedberg should communicate with Professor J. H. Mathews, director of the course in chemistry, since only a limited number of research workers can be accommodated.

YALE UNIVERSITY AND DR. CHITTENDEN

AT the regular monthly meeting of the Yale Corporation, held on March 11, the following resolution was adopted in connection with the resignation of Dr. Chittenden as director of the Sheffield Scientific School, which takes effect at the close of the present university year:

Even in his undergraduate days in the Sheffield Scientific School Director Chittenden had begun to pave the way to a distinguished career as a teacher and investigator in physiological chemistry, for the development of which as an independent branch of study he has been responsible not only at Yale but in large measure in the United States. His was in many respects the path of a pioneer in a borderline science which inevitably led both at home and abroad to recognition and honors in which the institution that Director Chittenden served has shared abundantly.

Not less successful has been Dr. Chittenden's leadership as director of the Sheffield Scientific School for nearly a quarter of a century. His unflagging energy and broad vision have contributed largely to increase the material resources of the school, to enlarge the scope of its usefulness as an institution for professional training in science, and to stimulate and encourage investigation. The recognition at Yale of the important part which the study of science should play in modern education is due in no small degree to Dr. Chittenden's influence. Research at Yale has always found a staunch supporter and advocate in him.

To a man of Dr. Chittenden's training and ideals even the partial abandonment of the pursuit of science necessitated by the call to an executive post must have meant a personal sacrifice. He has accepted this, as he has undertaken many other public tasks, in a spirit of service which deserves grateful recognition on the part of Yale University.

The *Yale Alumni Weekly* says in an editorial article:

The resolutions adopted on the resignation of Director Chittenden by the Yale Corporation place a richly merited emphasis on the character
